

Cow Sense® Product Support Bulletin

Inventory Report

Discussion: An inventory report was implemented in Cow Sense v4.42 in response to user requests. The Inventory Report gives administrative information about the herd file in the header, including the Herd ID number, PIC version, and overlay template.

The body of the report tallies head counts for each of the main animal categories in Cow Sense – cows, bulls, and calves. For cows and bulls, the Inventory Report first summarizes status, then tallies *active* animals for each of the user defined groups created under Enter Data > Define Groups.

Similarly for calves, the first section summarizes status. Following is a list of your production cycles by date, the status, and the number of records in each. The third section inventories record count by calf history for the current production cycle. Finally, the user defined calf groups are tallied for all calves. In version 4.5, the selection for calf groups was changed to include only *active* calves.

Viewing the Inventory Report: To view the Inventory Report, go to Maintenance > Administration > Inventory in Cow Sense.
