Tag Wizard

Discussion: The purpose of this Production support Bulletin is to provide an introduction and review use of the Tag Wizard Utility.

Why use the Tag Wizard?

The Tag Wizard is a utility program that is included with Cow Sense. It is designed as a low-tech method to link EID tags to calves with a visual ID. This tool provides the user a simple Field Form (see example of Field Form on the back of this sheet) that displays the EID's, sorted in order so that the visual ID can be written next to the EID number that has been applied. When the Field Form is complete, the user can then use the Tag Wizard to type in the Visual ID which then applies the EID onto the animal record in Cow Sense. This eliminates any need for manually typing the 15 digit EID number and reduces typographical errors. The Tag Wizard can also be used as a backup option for those using EID Readers, in the event of an equipment malfunction.

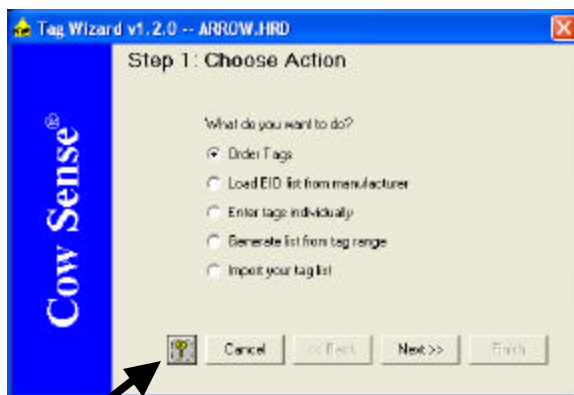

The Tag Wizard also allows you to add or update calves in a Production cycle from an EID list. The EID lists can be obtained from Midwest MicroSystems (if purchased from MMS) or the EID manufacturer. The Tag Wizard can also help with ordering tags.

Where is the Tag Wizard?

The Tag Wizard can be accessed or launched one of two ways. One way is to click on the yellow tag button located under the main menu of Cow Sense Icon Tool Bar. The second way to open the Tag Wizard is to go to Utilities > Tag Wizard.

Tag Wizard User's Guide

The Tag Wizard User's Guide can be opened by clicking on the question mark button on the lower left side of the Tag Wizard window. (See screen capture below) This guide will provide you with detailed steps for the action you wish to take.
