

Second Site License Policy *NxGen*

Updated January 1, 2019

Cow Sense® Herd Management Software and the Cow Sense Suite of Products are normally licensed as a single-user installation on one computer. Midwest MicroSystems realizes that producers sometimes need to have the software installed on more than one machine for use *within a single operation*. Therefore, an additional license for a second site is available.

TERMS

1. **Fee.** The registration of a second site requires a \$95 fee.
2. **Permitted use.** The second site license permits the user to install and use Cow Sense on two computers, as documented by unique registration numbers to be provided with their request. The second site license extends to other Cow Sense companion products purchased including the NxGen Sale Manager *Exchange* and the Pocket Cow Sense NxGen Desktop Component. The two installations are for use *within a single operation*.

Third site installations of the same product Serial Number are not available. Alternatively, the user may purchase the Cow Sense Analysis Edition (read only version) for \$95 as another site option.

3. **Other Products.** Under the same Terms as Cow Sense *NxGen*, a second site license is made available for: NxGen Chuteside and Verson 3 Sale Manager Program (separate from the NxGen *Exchange* component). Each of these product's second site registration requires a \$95 fee.

A second site license is not available for Pocket Cow Sense (Handheld component) as it requires a separate license for each installation on a handheld device.

4. **Customer Service and Support.** Second site installations significantly increase support demands and Midwest MicroSystems recommends that users maintain a positive balance in their Customer Service/Technical Support account.
5. **Warranty.** Additional care is required for managing second site installations. Data will be lost if herd files are inappropriately overwritten in the transfer from one machine to another. Midwest MicroSystems is not responsible for data loss in any Cow Sense installation.
